Comments

I approve of the proposed rule change using adaptive management and the latest insight provided by science to manage national forests.

I would like motorized recreation, grazing, timber, mineral extraction and oil and gas to have a smaller impact in the national forests. That is, do not permit an increase in any of these activities. These activities are very destructive to the environment and disruptive to the serene quality of the forests. I don't want to see cattle, or evidence of cattle in the forest. I don't want to see OHVs and ATVs, or their trails in the forest either. They are loud, polluting, and enabling lazy Americans to be outside, yet not actually get exercise. They are very destructive and enable severe erosion.

Thank you.
